

Real Time Adjudication

The Conexia Real Time Adjudication (RTA) solution is a revolutionary concept that allows healthcare payers (insurers, administrators, managed care organizations) to completely eliminate claims processing. Healthcare services are automatically approved at the point of care, before the service is provided. This means less paperwork, faster turnaround times and more satisfied patients.

How it works

- The payer enters pre-defined business rules into the Conexia rules engine
- Rules are applied in real-time and 90-95% of cases can be processed automatically
- The other 5-10% of cases feed in to a medical auditing module, which is monitored by medical experts.
- Medical services are approved and processed at the point of care, before the service is rendered
- Provider receives payment automatically
- The patient is informed of any co-payment and charged directly by the provider at the time of service
- No more claims

Real Time Adjudication

Components of the solution

- Data capture points
- Data management services
- Real-time adjudication software
- Claims auditing module
- Business Intelligence
- Training and support

Benefits for Payers

- Reduce administration costs – no more claims processing
- Better control of medical costs
- Fraud prevention
- Live data for making business decisions

Benefits for Providers

- Fast and automatic identification of patients and their coverage
- Certainty about payment
- Reduces paperwork – no more claims

Benefits for Patients

- No more claims, no more surprises
- Certainty about co-payment (before the services are rendered)
- Better quality healthcare resulting from providers' access to richer, up-to-date medical records
